

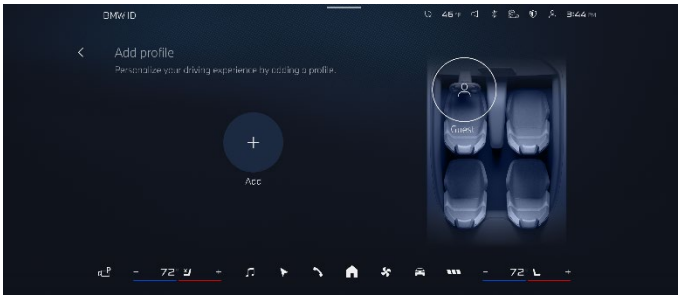
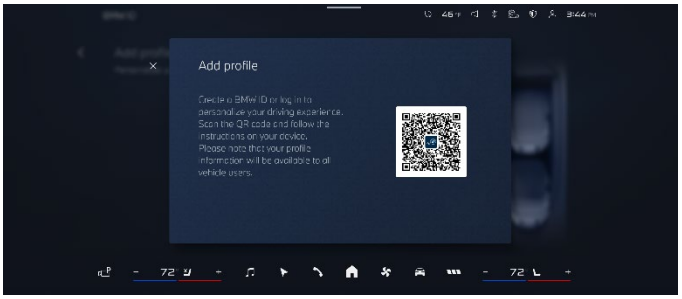
PERSONALIZATION WITH OPERATING SYSTEM X

Personalization in your BMW is made seamless with your BMW ID and simple in-car login using a compatible mobile device. Saved personalization settings include customized profile, welcome greeting and seat and mirror preferences. Suggestions based on habits and more are automatically activated when using your paired vehicle or Digital Key. These individual vehicle settings are also synchronized to other BMW vehicles with Operating System X for ease of use.

If using the "Log in with BMW ID" method, be sure to download the most recent version of the My BMW App on your mobile device and log in to your account. The app is available on the Apple App Store and Google Play Store.



To begin this process, select the "Add" option from the choices on the BMW ID/ Driver profile menu.



Then, scan the QR code using your mobile device's camera. The QR code will open the My BMW App.

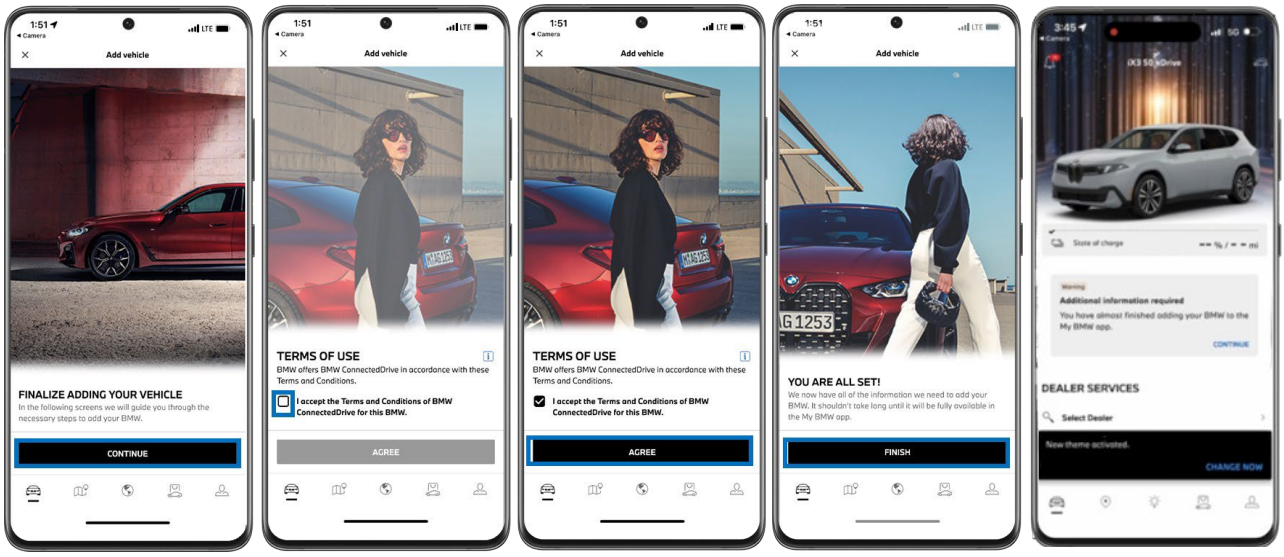
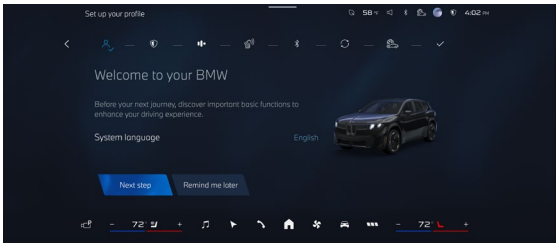
PERSONALIZATION WITH OPERATING SYSTEM X

Then, log in with your BMW ID and follow all the prompts suggested on the My BMW App in the mobile device.



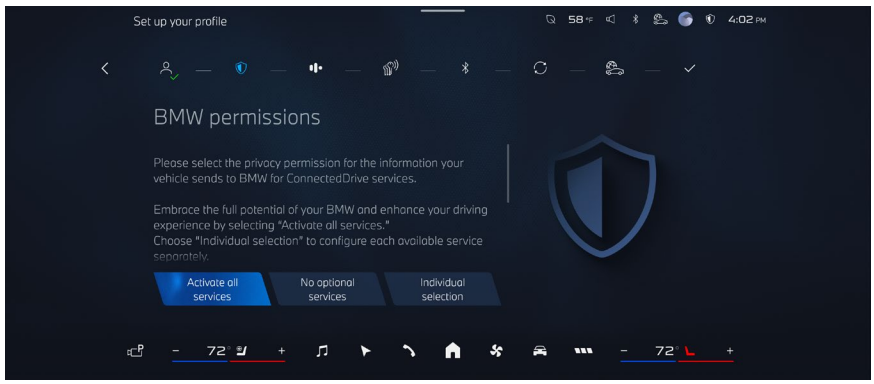
To finalize adding your vehicle on your device, follow prompts and agree to the "TERMS OF USE". The vehicle tab will appear, indicating that the vehicle and My BMW App are synced.

Now, in the vehicle, select “Next Step” to start the Personalization.

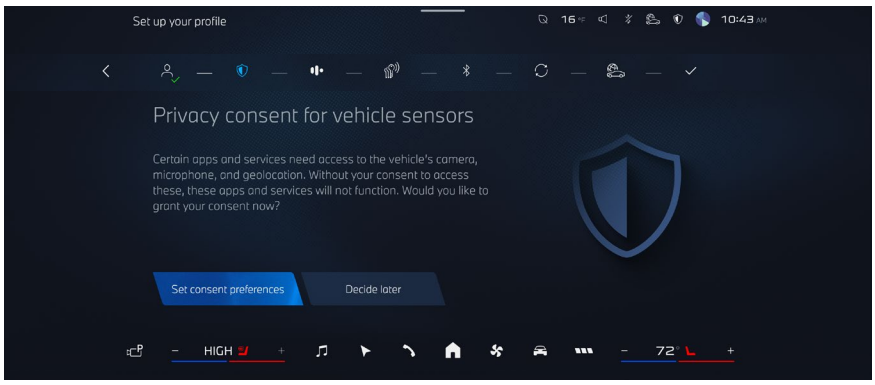


PERSONALIZATION - DATA PRIVACY

Review the BMW permissions and select the options that you wish to enable. It is important to note that some features in the vehicle may be unavailable if the data privacy options are not enabled.

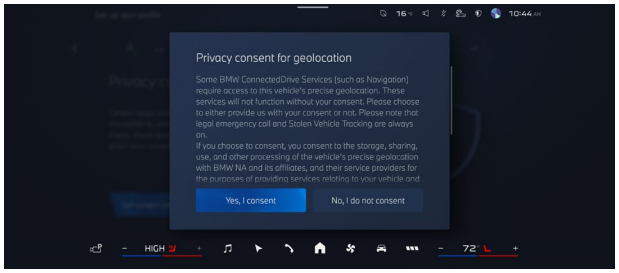


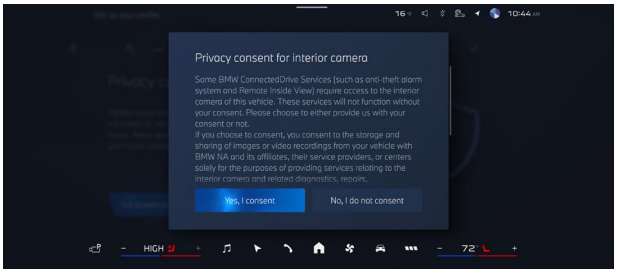
Certain vehicle functions and services need access to the vehicle's camera, microphone, and geolocation for full functionality. The user can choose to grant or deny consent for these. See more information on the next page.

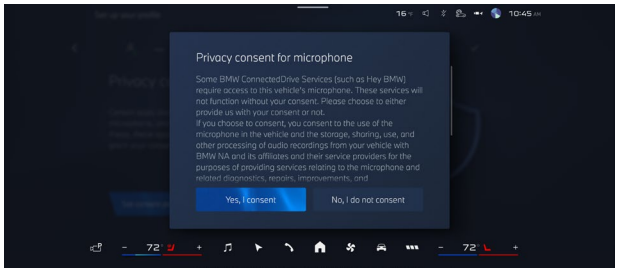


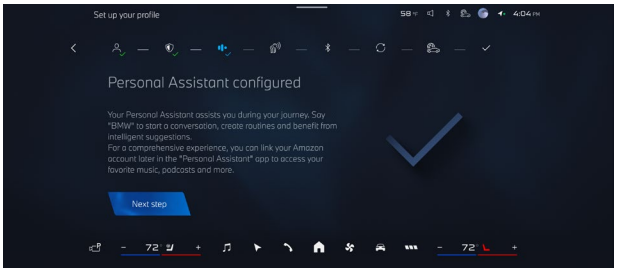
PERSONALIZATION - DATA PRIVACY

BMW ConnectedDrive services may require access to the vehicle's geolocation data to provide navigation, traffic updates, and location-based features. Also, some services use the interior camera, for example, for Remote Inside View via the My BMW App or the Anti-Theft Recorder, which records the vehicle interior automatically after the alarm systems triggers. The camera can also be used by the car's occupants to take snapshots during the journey.









The microphone is used for voice commands and Intelligent Personal Assistant interaction. Without consent, voice assistant functionality will not be available. After permissions are set, the Personal Assistant is configured and ready for use. Refer to the "Personal Assistant" section in this guide for more information.

To access the Data Privacy menu later, open My Vehicle on the central display, then select System followed by Data privacy.

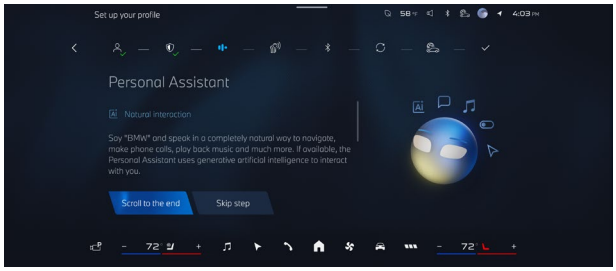
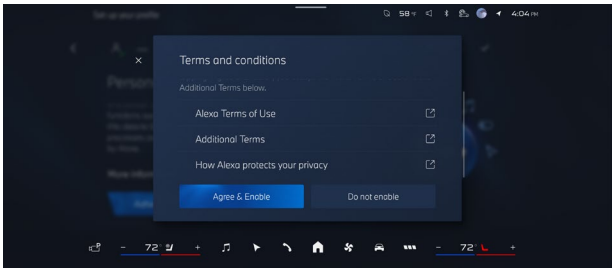
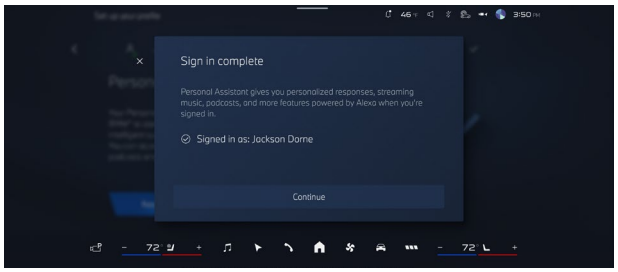
PERSONALIZATION - PERSONAL ASSISTANT

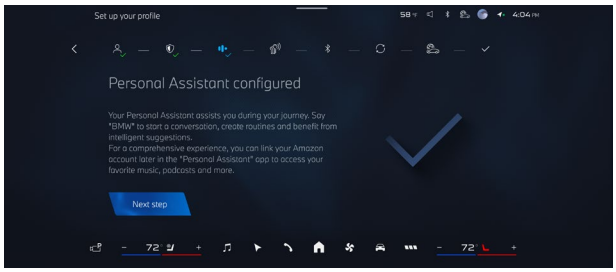
The BMW Personal Assistant allows users to control car settings, navigation, and communication by voice, providing a safer and more convenient hands-free driving experience.





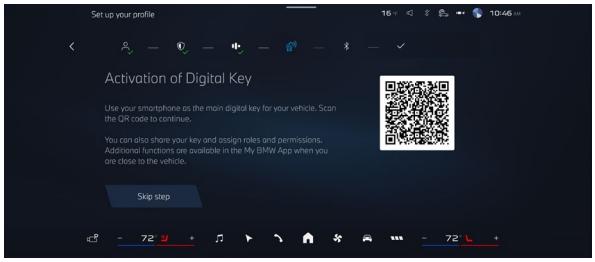
To use the Intelligent Personal Assistant, you must first activate the service and then accept the Terms and Conditions for both BMW and Amazon Alexa. Accepting both sets of terms is required to enable the voice assistant's speech and intelligent assistant capabilities. If you do not accept both Terms and Conditions, the Intelligent Personal Assistant will not be available, and you will not be able to use any voice interaction or intelligent assistant features in your vehicle. Additionally, you will be offered the option to log in with Amazon Alexa credentials for additional functionality, but please note this is completely optional and not required to use Intelligent Personal Assistant.



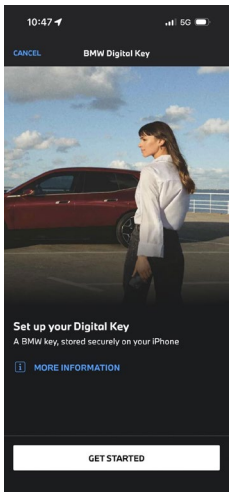


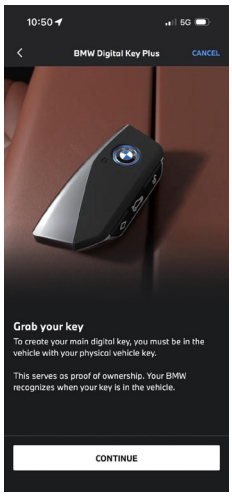
The login with Amazon Alexa was successful, and the Personal Assistant setup is now complete.

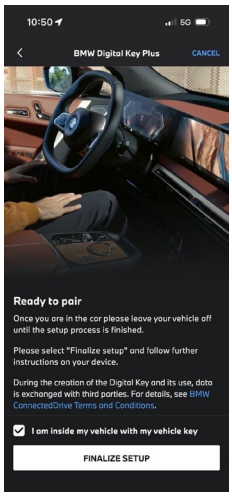
PERSONALIZATION - DIGITAL KEY

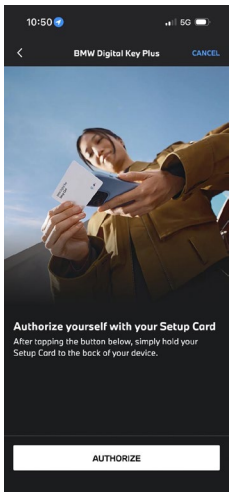


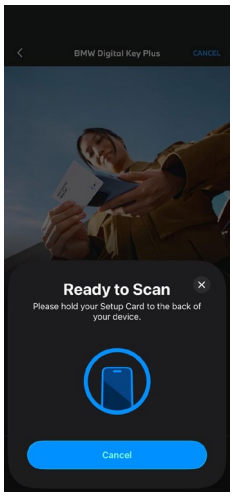
Scan the QR code using your mobile device and select “Continue”. This will require you to complete the BMW Digital Key synchronization on your My BMW App. Then, follow the prompts in the app to set up the pairing process.

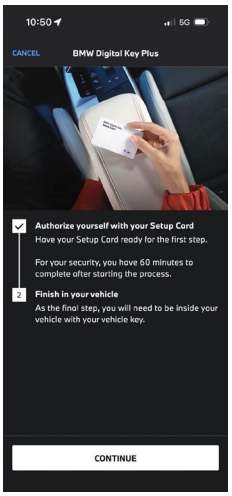




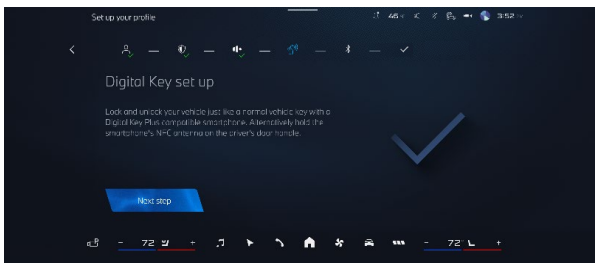






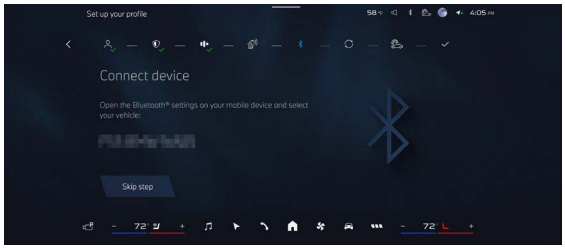


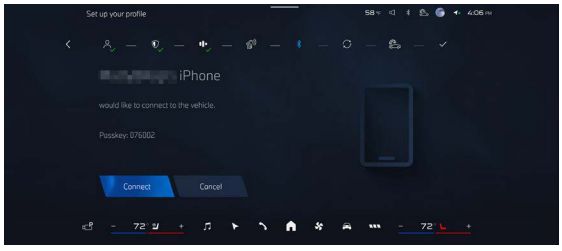
Your display will confirm that the key has been activated. Select, “Finish” to finalize Digital Key set up.

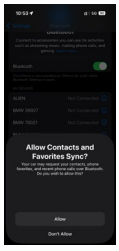


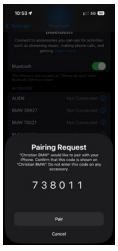
PERSONALIZATION - BLUETOOTH

Enable Bluetooth on your device and connect your device to the vehicle. You may receive a matching code to confirm on your BMW screen and mobile device. Ensure you select “Connect” on the vehicle and accept pop-ups or connection requests on your mobile device.

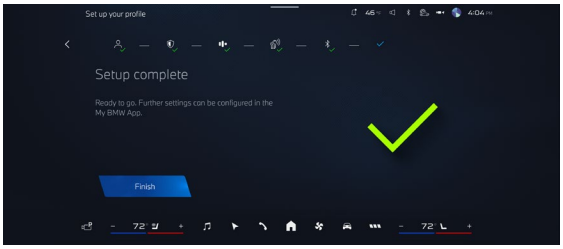








Return to the SETUP menu. Select “Finish” on the “Additional settings” menu to be returned to the profile menu. Now, the personalization is complete. If you would like to connect Apple CarPlay or Android Auto, refer to your owner's manual or visit the following links:



- Apple CarPlay Setup
- Android Auto Setup
