

Summary

Feature Upgrade:

- Feature Upgrade: Climate Control
- Feature Upgrade: Remote Engine Start
- Feature Upgrade: Alarm Function
- Feature Upgrade: Amazon Alexa Car Integration
- Feature Upgrade: BMW Navigation
- Feature Upgrade: Plug & Charge
- Feature Upgrade: Charging Preparation
- Feature Upgrade: Comfort Access
- Feature Upgrade: My Modes
- Feature Upgrade: Digital Key Plus
- Feature Upgrade: Personal eSIM

Quality improvement & Service Task:

- Quality Improvement: Control Display
- Quality Improvement: Speech Recognition and Voice Assistant
- Service Task: Programming Fuel Tank Control Unit

Notes on Remote Software Upgrade

This Remote Software Upgrade updates existing functions to the latest technical standards. New features depend on your installed equipment, which you can review in your BMW Owner's Manual, at your service center, or through BMW ConnectedDrive Customer Relations.

The update automatically refreshes installed BMW ConnectedDrive apps and the Integrated Owner's Manual. Be aware that control messages may appear due to system restarts, such as powertrain malfunctions. If these messages persist on subsequent trips, contact your service center.

For BMW Plug-in Hybrids and electric vehicles, charging processes might be interrupted and not automatically resumed if you update while charging. Note that unapproved conversions, retrofits, engine tuning, or special coding may be lost or cause issues due to the upgrade. BMW of North America, LLC and service centers are not liable for any resulting damage. After installation, privacy settings may revert to factory defaults, so check and adjust them as needed. Remember, driver assistance systems do not replace your responsibility while driving.

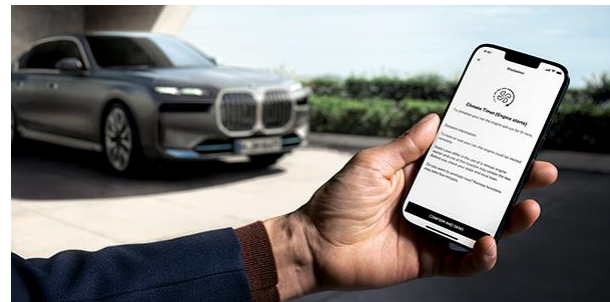

Feature Upgrade: Climate Control

This update enhances air conditioning performance, allowing your BMW's interior to heat up even faster in cold temperatures.

Feature Upgrade: Remote Engine Start

This update improves the Remote Engine Start function with a more stable connection, ensuring your BMW starts more reliably from a distance when activated via the My BMW App or vehicle key.

Feature Upgrade: Alarm Function

With this update, you can deactivate the alarm function using your BMW Digital Key Plus, helping to prevent unintended alarms caused by movement or vibration. This is especially useful when parking in a duplex garage or on a swaying ferry.

Feature Upgrade: Amazon Alexa Car Integration

This update enhances speech recognition and overall performance of the BMW Intelligent Personal Assistant. When multiple devices are connected, it now automatically uses the phone book selected in the telephone app, eliminating the need for manual selection. This makes calling contacts via voice commands even easier.

Feature Upgrade: BMW Navigation

The updated BMW map view search bar makes selecting a destination effortless. With one click, set your workplace or home as your destination, start navigation instantly using the new flag button, or remove suggested destinations with the "X" button. Additionally, the map panel now opens automatically for 10 seconds upon startup, giving you immediate access to navigation for a seamless journey.

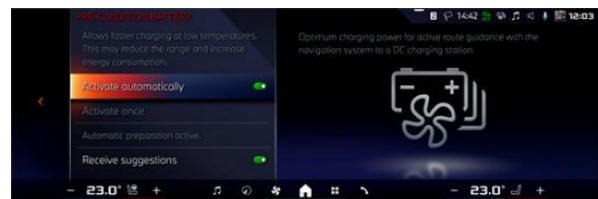

Feature Upgrade: Plug & Charge

Charging your BMW is now easier than ever. This update enables automatic authentication when you connect the charging cable—no app or card needed. Charging costs are seamlessly billed through your Plug & Charge-enabled rate, and invoices can be viewed in the My BMW App. Availability depends on the charging station provider and will be accessible as soon as they support the feature.

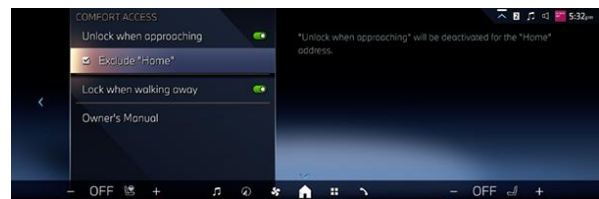

Feature Upgrade: Charging Preparation

With this update, the “Prepare battery” icon now appears in both cold and warm temperatures, keeping you informed when your BMW’s battery reaches the ideal charging temperature. The icon is visible once you start driving to a fast-charging station and remains active while battery heat management optimizes DC charging.

Feature Upgrade: Comfort Access

This upgrade allows you to adjust the Comfort Access feature for your home address. In the Comfort Access menu, you can set your home address as an exception to disable automatic unlocking when passing by your BMW. This ensures your vehicle remains locked when approaching until manually accessed.

Feature Upgrade: My Modes

With this update, your BMW can automatically start and drive in My Mode **EFFICIENT**, eliminating the need to switch manually.

Feature Upgrade: Digital Key Plus

With this update, you can open and close the tailgate via the My BMW App when near your vehicle. This option is available under “Remote Controls” and requires automatic tailgate option and the BMW Digital Key Plus.

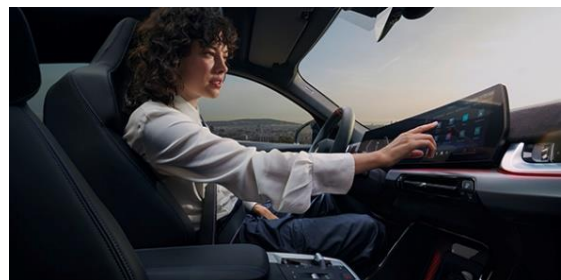

Feature Upgrade: Personal eSIM

With this update, you can quickly set up a Wi-Fi hotspot in your BMW that uses the powerful external antennas of your vehicle. Optimized reception allows you to surf faster and make phone calls in top quality while on the move.

Quality Improvement: Control Display

The overall performance, especially in the entertainment and control display area, will improve after this upgrade.

Quality Improvement: Speech Recognition and Voice Assistant

Your BMW now automatically accesses contacts from the selected phonebook in the telephone app- no manual selections needed. Voice command recognition for "Drive me home" and "Drive me to work" have been improved, along with better detection when searching for radio stations using your voice assistant.

Service Task: Programming Fuel Tank Control Unit

This upgrade enhances the reliability of warning displays related to the tank control unit (integrated fuel module). As part of a recall, this improvement is delivered via software update — no need for a workshop visit.
