- **Feature Upgrade: AC charging is now even more reliable**
- **Feature Upgrade: Filter charging stations even more easily**

### Quality improvement & Service Task:

- **Quality Improvement: General quality and error correction**

### Notes on Remote Software Upgrade

**This Remote Software Upgrade updates existing functions to the latest technical standards. New features depend on your installed equipment, which you can review in your BMW Owner's Manual, at your service center, or through BMW ConnectedDrive Customer Relations.**

**The update automatically refreshes installed BMW ConnectedDrive apps and the Integrated Owner's Manual. Be aware that control messages may appear due to system restarts, such as powertrain malfunctions. If these messages persist on subsequent trips, contact your service center.**

**For BMW Plug-in Hybrids and electric vehicles, charging processes might be interrupted and not automatically resumed if you update while charging.**

## BMW Release Notes 07/25

**Note that unapproved conversions, retrofits, engine tuning, or special coding may be lost or cause issues due to the upgrade. BMW of North America, LLC and service centers are not liable for any resulting damage. After installation, privacy settings may revert to factory defaults, so check and adjust them as needed. Remember, driver assistance systems do not replace your responsibility while driving.**

### Feature Upgrade: Optimized Bluetooth connection stability and speed for mobile devices

This update significantly improves connection stability and speed between your mobile device and your BMW, reducing disconnections and enabling faster data transfer. To continue using features like telephone, Apple CarPlay, Android Auto, and music streaming, you'll need to manually reactivate your previously connected Bluetooth devices once in the Bluetooth list. For seamless eSIM use, complete a one-time contact sync by clicking the Telephony button in your personal eSIM settings.

### Feature Upgrade: The BMW Intelligent Personal Assistant now understands even more

Your BMW Personal Assistant now understands more commands than ever. For example, just say “Hey BMW” to operate the speed warning using voice control.

### Feature Upgrade: Discover the new BMW Intelligent Personal Assistant, now with two new voices

Your voice assistant now offers new male and female voice options, selectable in the Personal Assistant app in your vehicle. It still responds to “Hey BMW,” but now reacts faster and understands you better. Press the microphone button or use the Personal Assistant menu to complete the one-time setup.

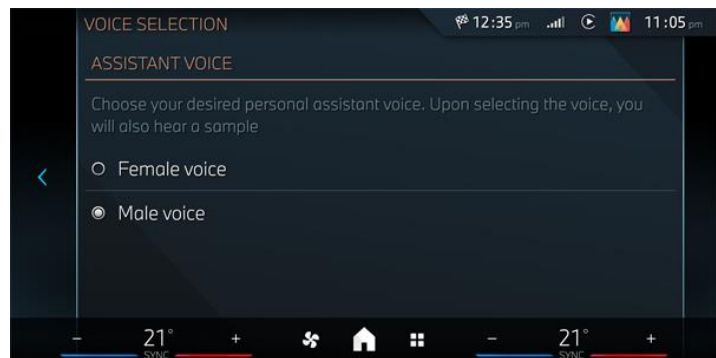

### Feature Upgrade: Your infotainment system is now even more stable

This update optimizes your BMW's infotainment system for greater stability and faster response times. Entertainment content now displays more smoothly, delivering an even better in-car experience.

### Feature Upgrade: The BMW Intelligent Personal Assistant now offers new functions

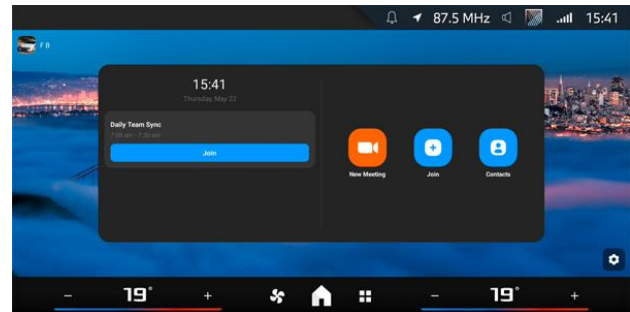

This update adds a new female voice option to your BMW Intelligent Personal Assistant, alongside the existing male voice—selectable in the in-vehicle app. The assistant now responds faster, understands you better, and can identify whether the driver or front passenger is speaking for commands like “Hey BMW, open my window,” ensuring the correct window is opened. If two phones are connected via Bluetooth, you can now access both phone books and contacts via voice. Shortly after the update, a new language package required for the assistant will be downloaded automatically.

### Feature Upgrade: Zoom meetings now also available via video in your BMW

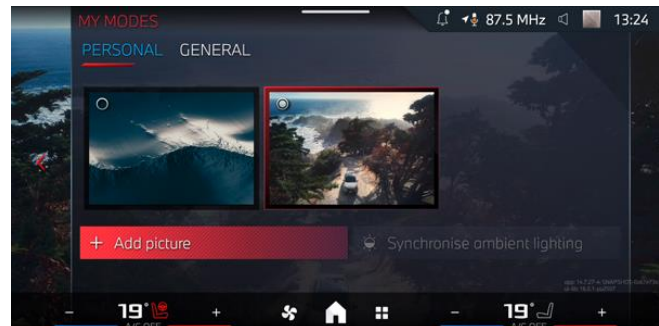

You can now take part in Zoom video conferences while your BMW is stationary. When driving, video on the central display switches off automatically, and the meeting continues seamlessly via audio, resuming video when you stop. Download the Zoom app from the BMW ConnectedDrive Store. This feature is part of the separately bookable BMW Digital Premium package.

### Feature Upgrade: Your BMW has become even more customizable in Personal Mode

Set your favorite image as the background in Personal Mode for a more customized drive. Simply open “Personal Picture” in the My BMW app’s vehicle configuration or scan the QR code in Personal Mode inside your BMW. You can upload up to five images, and—if desired—the ambient lighting will adapt to match your photo’s colors.

Available with the separately bookable BMW Digital Premium package..

## Feature Upgrade: Now also play video games with selected Bluetooth controllers in your BMW

Connect up to two Bluetooth controllers from standard game consoles to your BMW and enjoy video games from the BMW ConnectedDrive Store. Available with the separately bookable BMW Digital Premium package.

## Feature Upgrade: Navigation is now even easier to use

Recent destinations and favorites are now grouped under a new icon, giving you quicker access in the Navigation menu. When route guidance is active, you'll receive additional navigation instructions, and elevation is now permanently shown on the map. All map elements remain fully selectable via touch or the BMW Controller.

## Feature Upgrade: AC charging is now even more reliable

This update improves the stability and reliability of AC charging, ensuring smoother and more consistent charging sessions.

### Feature Upgrade: Filter charging stations even more easily

**You can now filter charging stations in your navigation by availability. Activating the “Now available” filter shows only free and open stations, helping you quickly find charging points ready for use.**

### Quality Improvement: General quality and error correction

**This software update brings your BMW up to date, rectifies errors and prevents security gaps. For an improved driving experience. This update is recommended for everyone.**
