- **Feature Upgrade: Smart Opener**
- **Feature Upgrade: IPA with Two New Voices**
- **Feature Upgrade: IPA Female Voice By Default**

Quality improvement & Service Task:

- **Quality Improvement: General quality and error correction**

Notes on Remote Software Upgrade
This Remote Software Upgrade updates existing functions to the latest technical standards. New features depend on your installed equipment, which you can review in your BMW Owner's Manual, at your service center, or through BMW ConnectedDrive Customer Relations.

The update automatically refreshes installed BMW ConnectedDrive apps and the Integrated Owner's Manual. Be aware that control messages may appear due to system restarts, such as powertrain malfunctions. If these messages persist on subsequent trips, contact your service center.

For BMW Plug-in Hybrids and electric vehicles, charging processes might be interrupted and not automatically resumed if you update while charging. Note that unapproved conversions, retrofits, engine tuning, or special coding may be lost or cause issues due to the upgrade. BMW of North America, LLC and service centers are not liable for any resulting damage. After installation, privacy settings may revert to factory defaults, so check and adjust them as needed. Remember, driver assistance systems do not replace your responsibility while driving.

Feature Upgrade: Automatic Start/Stop Function

You can now activate or deactivate the Automatic Start/Stop function even quicker. Simply hold down the direct access button for the driving settings in the center console or say "Hey BMW, deactivate engine start/stop". A pop-up on the control display confirms the successful action. The Automatic Start/Stop function is deactivated until the next engine start.

Feature Upgrade: NACS Charging Station Support

This upgrade enables your BMW to charge at stations equipped with the North American Charging Standard (NACS). This means access to any networks which use this standard, including Tesla Superchargers. To use NACS chargers, an additional adapter is required. Check your My BMW app Message Center for updates once BMW approved adapters are available.

Feature Upgrade: Charging Stations POI Filter

You can now filter charging stations in your BMW navigation by nearby locations such as cafés, restaurants, or supermarkets. Simply open "Filter options" at the top right of the search and select the new "Nearby" filter to set your preferences. Your BMW will then display matching charging stations. The filter resets automatically for your next search.

Feature Upgrade: Vehicle Apps

The "Vehicle" tab in the "All Apps" menu on your BMW control display is now more clearly structured. It focuses on key settings such as lights, climate control, doors, and windows. All other functions remain available under "All Apps.
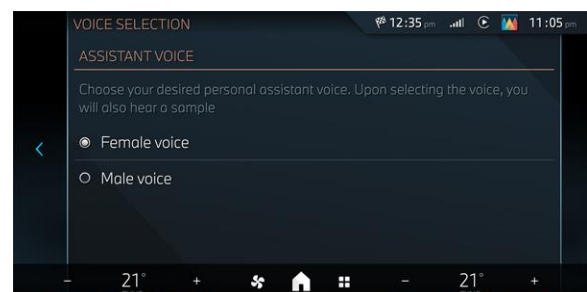

Feature Upgrade: Smart Opener

After this update, your BMW will respond more precisely to your foot kick under the cargo area and open the tailgate even more reliably. Simply move your foot dynamically back and forth at the center of the bumper, then place it back down. Your BMW flashes to confirm, and the tailgate opens automatically. The Kick-to-Open feature works when your Digital Key or vehicle key is with you.
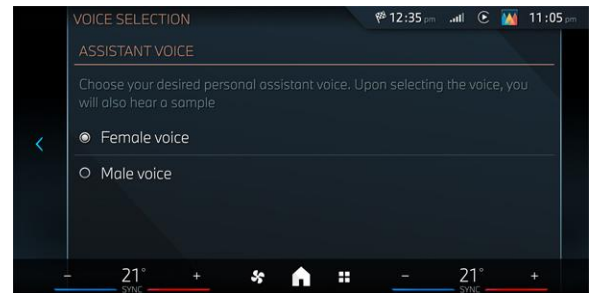

Feature Upgrade: IPA with Two New Voices

Your BMW now features a new female and male voice for the Intelligent Personal Assistant. Select your preferred voice in the Personal Assistant menu, and enjoy faster, more accurate responses to "Hey BMW." Press the microphone button or use the Personal Assistant menu to start the one-time setup. A required language package will download automatically after the update.

Feature Upgrade: IPA Female Voice By Default

Following feedback from the BMW community, the Intelligent Personal Assistant will now default to the female voice after this update. If you previously selected the male voice, it will switch automatically. Both male and female voices remain available and can be changed anytime in the BMW Intelligent Personal Assistant app. A required language package will download automatically shortly after the update.

Quality Improvement: General quality and error correction

This software update brings your BMW up to date, rectifies errors and prevents security gaps, for an improved driving experience. This update is recommended for everyone.
